

Requirement Analysis Phase

Customer Journey Map

Scenario

An enterprise employee requesting a new network connection or a workspace relocation through the ServiceNow self-service portal — from first becoming aware of the request process to submission, manager approval, fulfillment, and follow-up.

	ENTICE <i>How does the employee first become aware of this process?</i>	ENTER <i>What happens as they begin the request?</i>	ENGAGE <i>What happens in the core moments of the process?</i>	EXIT <i>What happens as the process finishes?</i>	EXTEND <i>What happens after the request is fulfilled?</i>
Steps <i>What does the employee experience?</i>	New workstation is assigned, or the employee's desk/office is relocated	Logs into the ServiceNow Service Portal Opens the "Network Request" catalog item	Selects request type: New Connection or Relocation Reviews auto-filled profile details (g_user) Completes dynamic hardware & location fields Submits the request	Receives "Order Placed" confirmation Network connection is activated at the new desk	Views request history in profile Reuses saved profile data for the next request
Interactions <i>People, places & digital touchpoints</i>	- Onboarding email / relocation notice - Manager or facilities team - IT self-service portal link	- ServiceNow Service Portal (web/app) - Client Scripts auto-populate identity via g_user API	- Catalog UI Policies (dynamic show/hide fields) - Flow Designer approval routing to manager - Manager's task queue & approval email - Network Administrator (fulfiller) - u_network_database (secure record write)	- Automated confirmation email - Portal status badge / receipt page	"Completed Requests" section of profile - Predictive Intelligence auto-assignment for future tickets
Goals & Motivations <i>"Help me..." / "Help me avoid..."</i>	Help me know how to get connected quickly	Help me find the right request without digging through menus	- Help me submit accurate details the first time - Help my manager approve without being chased - Help IT trust that the data is clean	Help me know for certain my request is complete	Help me avoid re-entering the same details next time
Positive Moments	Employees discover the self-service portal is available in	Profile auto-populates instantly — feels fast and modern	Irrelevant fields are hidden automatically, so the form feels simple	Instant "Order Placed" confirmation gives peace of mind	Saved profile data speeds up any future request

	ENTICE <i>How does the employee first become aware of this process?</i>	ENTER <i>What happens as they begin the request?</i>	ENGAGE <i>What happens in the core moments of the process?</i>	EXIT <i>What happens as the process finishes?</i>	EXTEND <i>What happens after the request is fulfilled?</i>
<i>What feels good along the way?</i>	onboarding/relocation communications	Portal is far cleaner than the old email/paper process	- Manager approval is triggered instantly — no manual chasing - Validation catches missing data before submission	Employees trust the network will be ready on time	Visibility into past requests builds trust in IT
Negative Moments <i>What causes friction or frustration?</i>	Some employees still default to emailing IT, unaware the portal exists	First-time users are occasionally unsure which request type to pick	- Multi-stage approval can feel opaque with no live progress indicator - Managers occasionally need to clarify unclear address/location fields	Employees don't always know the exact activation time or SLA	No proactive check-in if the connection has issues after setup
Areas of Opportunity <i>How might we make it better?</i>	Promote the self-service portal more visibly in onboarding & relocation comms	Add short contextual tooltips explaining "New Connection" vs "Relocation"	- Add a real-time status tracker for approval stage - Enable one-click manager approval directly from the email - Use Predictive Intelligence to auto-assign the best-fit fulfiller	Show an estimated activation time / SLA countdown on the receipt page	Send an automated check-in 24 hours after activation to confirm connectivity
